**The Bathroom & Shower Safe Lighting Guide**

This guide is designed to help you in selecting safe lighting for your bathroom, shower or sauna. In fact any area inside the home that may potentially come into contact with water.

■ To find out more, please study the Lighting ZONE Guide above.

- For the purposes of safe lighting the bathroom or shower area is divided into ZONES. The zones are numbered according to the distance away from a source of water.

	<b>Zone 0</b> Suitable for Zone 0 (IP68 submersible to 9m). The ultimate in watertight fittings. Suitable for saunas, steam rooms or to be mounted underwater (down to 9m).
	<b>Zone 1</b> Suitable for Zone 1 (IP65 jetproof). Should be fitted where the fitting may be subjected to a jet of water; for example from a shower handset.
	<b>Zone 2</b> Suitable for Zone 2 (IP44 splashproof). Should be fitted wherever the fitting may be splashed. Anywhere within 0.6m of a basin or similar water source.
	<b>Zone 3</b> Suitable for Zone 3. For all other areas where jets or splashes of water will not occur.
